

## ABSTRACT

Our project WARDROBE an ecommerce shopping site helps customer to find and buy all types of clothing and fashion products. It is useful in the way that it makes an easier way to search and buy products online with minimum efforts. WARDROBE is an interactive e-commerce solution providing users with an opportunity to buy and sell products.

In this website we have two module first is customer and second is admin. The site displays products uploaded by admin which can be browsed by customer and can be added to cart.

The customer can make order for the products and make payment procedure initiated. Then payment confirmation is made by an email. The customer will have to register to make entry into cart. This site provides only Cash On Delivery Facility.

The admin module contains access to admin page on the website. The admin can change everything he can add and edit products and view the number of orders made.

The technology Stack used is MERN where REACT acts as frontend framework and Node as backend with MONGODB as database .
